

EU-Greenland Partnership

SEPTEMBER 2026

The EU and Greenland have a long-standing partnership built on shared priorities. Through the **new EU-Greenland Joint Declaration** our partnership is evolving to respond to a changing context and new opportunities.

Building on strong foundations in areas such as education and fisheries, it is now expanding into new areas that reflect Greenland's needs and priorities. Through a **new €200 million Global Gateway Partnership Package**, we will boost support for connectivity, sustainable energy and critical raw materials.

Together, the EU and Greenland are **creating opportunities** for people, **supporting sustainable development** and **economic resilience** while strengthening cooperation in the Arctic.

EU-Greenland cooperation

Global
Gateway

Digital Connectivity, Data and Governance

The EU supports **secure digital connectivity**, including subsea cables, satellite solutions, data infrastructure and the development of digital ecosystems. Through the Tusass Connect subsea cable project, EU support will help improve internet speed, resilience and digital security across Greenland.

Energy and Clean Transition

Greenland has untapped potential in terms of renewable energy, particularly in hydropower. Together we strive to diversify Greenland's economy and **facilitate its clean transition**. The EU will support a programme led by Greenland's energy company, Nukissiorfiit, to modernise and decarbonise energy supply in remote settlements.

Sustainable Raw Materials

The EU and Greenland cooperate to develop sustainable raw materials value chains that **support Greenland's economic diversification** and contribute to a resilient European industry. The GreenRoc's Amitsoq graphite project and the Malmbjerg Molybdenum mining project are concrete examples of the potential for integrated Greenland-EU value chains.

Education, Research, Innovation and Skills

We are **strengthening Greenland's education** system, empowering young people and developing skills needed for the emerging economic sectors. EU budget support contributes to these efforts, with Greenland seeing increases in pre-school attendance and vocational education and training completion rates.

Tourism and Housing

The EU and Greenland will cooperate on sustainable tourism that **benefits local communities and SMEs**. We are also committed to modernising Greenland's housing stock, as an enabler of sustainable growth and social inclusion.

Fisheries, the Ocean and Blue Economy

We are promoting **sustainable fisheries management** and **environmental protection** to ensure long-term benefits for present and future generations. Through its Sustainable Fisheries Partnership Agreement, the EU and Greenland work together to sustainably manage fish stocks, strengthen fisheries governance and support the stability of coastal communities.

Close association

Greenland is part of the Kingdom of Denmark. While not part of the EU territory, Greenlanders are EU citizens. Since leaving the European Economic Community in 1985, it has been associated with the EU as an **Overseas Countries and Territories**.

In 2024, the EU opened a **permanent office in Nuuk**, strengthening its presence in Greenland and the wider Arctic and enabling closer engagement with Greenlandic partners and communities.

The Arctic has changed significantly since the EU adopted its current Arctic policy in 2021. An updated **EU Arctic policy** is expected in autumn 2026, reflecting the EU's commitment to a stable, secure and prosperous region.

The EU has earmarked **€225 million for Greenland** in the budget 2021-2027. For the next one (2028-2034), the Commission has proposed **€530 million - more than double** the current level of support.
